Github: https://github.com/Pravinchavan321 Mobile: +91-7499267940

SKILLS

Languages: Java, C++, C, SQL, Python (Advanced), JavaScript, CSS, HTML
Libraries: PyTorch, Scikit-Learn, Seaborn, Matplotlib, Pandas, NumPy
Tools/Platforms: Power BI, Hugging Face Hub, Linux, Git, GitHub, Excel, MySQL, PostgreSQL, MongoDB
Core Competencies: Problem-Solving, Project Management, Adaptability, Technical Communication, Quick Learner

PROJECTS

Predicting the Green Shift: A Time-Series & Geospatial Analysis of EV Adoption | Github | Nov' 25 - Dec' 25

- Developed a high-impact Power BI dashboard to analyze EV adoption trends, infrastructure needs, and manufacturer market share.
- Cleaned complex datasets via Power Query and engineered custom DAX measures for real-time KPI tracking. Designed an interactive 2-page dark-themed UI with integrated page navigation and advanced filtering.
- Visualized adoption across 45+ districts and identified key market growth drivers, delivering actionable insights through 8 core analytical visuals.

Tech: Power BI, DAX, Power Query, Data Modeling

Flixable Findings: Analyzing Netflix Content Trends | Github | Jan' 25 - May' 25

- Analyzed the composition of Netflix's content library to identify historical trends in genre popularity, regional distribution, and production focus, creating an interactive tool for data exploration.
- Designed a fully interactive dashboard in Excel using advanced PivotTables and dynamic Slicers. Conducted granular analysis of content duration, actor frequency, and country-specific output.
- Transformed raw catalog data into a navigational visual experience, revealing key patterns in content acquisition and global expansion.

Tech: Microsoft Excel, PivotTables, PivotCharts, Slicers, Data Validation.

MTA Ridership Recovery Analysis – Post-Pandemic Trends | Github | Jan' 25 - May' 25

- Analyzed New York City public transportation data to quantify post-pandemic recovery rates across varying transit modes (Subway, Bus, LIRR, Metro-North) and identify shifts in urban mobility patterns.
- Engineered a robust data pipeline to clean and process large-scale MTA transit datasets. Conducted time-series analysis to compare monthly ridership against pre-pandemic baselines. Utilized advanced statistical visualizations
- Quantified distinct recovery trajectories, revealing higher resilience in bus ridership compared to subways. Delivered a comprehensive data narrative that highlighted seasonal anomalies and shifting commuter preferences, providing actionable insights into the "new normal" of urban transit.

Tech: Python, Pandas, NumPy, Matplotlib, Seaborn.

TRAINING

Data Structures and Algorithms With C++ | Cipher Schools | May' 25 - Jul' 25

- Completed training in DSA using C++ for solving real-world complex problems.
- Gained Hands-on experience with industry-level application of algorithms
- Created the project using Data Structure and Algorithms.

CERTIFICATION

- **Oracle Cloud Infrastructure 2025 Data Science Professional (1Z0-1110-25) | Oracle |** Nov' 25
- **Cloud Computing** | NPTEL | Jun' 25

ACHIEVEMENTS

Leetcode Achievement | Leetcode |

- Solved the 150+ DSA problems and gained in-depth knowledge of DSA. Nov' 25

HackerRank Achievement | HackerRank |

- Earned the Daily Streak - Silver Badge (90+ days) for consistent problem solving. Nov' 25

EDUCATION

Lovely Professional University Phagwara, Punjab
Bachelor of Technology Aug' 23 - Present
Computer Science and Engineering; **CGPA: 7.77**

Yeshwant Mahavidyalaya (JR.). Nanded Nanded, Maharashtra
Intermediate with Non-medical Jul' 20 – Mar' 22
Percentage: 68%

Shankarrao More Vidyalaya And Junior College Pune, Maharashtra
Matriculation Jun' 19 – Mar' 20
Percentage: 94.40%
