PRAVIN CHAVAN

Linkedin: https://www.linkedin.com/in/pravin-chavan001 Email: sonuchavan987654321@gmail.com
Github: https://github.com/Pravinchavan321 Mobile: +91-7499267940

SKILLS

Languages: Exprees.js, Node.js, React.js, Java, C++, C, SQL, Python, JavaScript, CSS, HTML
Libraries: LangChain, PyTorch, Scikit-Learn, Seaborn, Matplotlib, Pandas, NumPy,
Tools/Platforms: AWS, Docker, Power BI, Linux, Git, GitHub, Excel, MySQL, PostgreSQL, MongoDB
Soft Skills: Problem-Solving, Project Management, Adaptability, Effective Communication, Quick Learner

PROJECTS

Predicting the Green Shift: A Time-Series & Geospatial Analysis of EV Adoption | Github Nov' 25 – Dec' 25

- Developed a high-impact Power BI dashboard to analyze EV adoption trends, infrastructure needs, and manufacturer market share.
- Cleaned complex datasets via Power Query and engineered custom DAX measures for real-time KPI tracking. Designed an interactive 2-page dark-themed UI with integrated page navigation and advanced filtering.
- Visualized adoption across 45+ districts and identified key market growth drivers, delivering actionable insights through 8 core analytical visuals.
  Tech: Power BI, Excel, DAX, Power Query, Data Modeling

Predictive Modeling for Early Detection of Heart Disease Risk | Github Nov' 25 – Dec' 25

- Developed an end-to-end ML framework to predict heart disease risk for clinical decision-making, executing comprehensive EDA and robust preprocessing (StandardScaler) on 70,000 records.
- Trained and evaluated five classification models (Logistic Regression, KNN, SVM, Decision Tree, Random Forest) using metrics including ROC-AUC, Recall, Precision, and F1-score.
- Selected Random Forest as the optimal model due to its high recall and interpretability, effectively minimizing critical false negatives via feature importance analysis.
  Tech: Python, NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn

MTA Ridership Recovery Analysis – Post-Pandemic Trends | Github Jan' 25 – May' 25

- Analyzed New York City public transportation data to quantify post-pandemic recovery rates across varying transit modes (Subway, Bus, LIRR, Metro-North) and identify shifts in urban mobility patterns.
- Engineered a robust data pipeline to clean and process large-scale MTA transit datasets. Conducted time-series analysis to compare monthly ridership against pre-pandemic baselines, utilizing advanced statistical visualizations to present findings.
- Quantified distinct recovery trajectories, revealing higher resilience in bus ridership compared to subways. Delivered a comprehensive data narrative that highlighted seasonal anomalies and shifting commuter preferences, providing actionable insights into the "new normal" of urban transit.
  Tech: Python, Pandas, NumPy, Matplotlib, Seaborn

TRAINING

Data Structures and Algorithms With C++ | Cipher Schools May' 25 – Jul' 25

- Completed training in DSA using C++ for solving real-world complex problems.
- Gained Hands-on experience with industry-level application of algorithms
- Created the project using Data Structure and Algorithms.

CERTIFICATES

Oracle Cloud Infrastructure 2025 Data Science Professional (1Z0-1110-25) | Oracle Nov' 25
Cloud Computing | NPTEL Jun' 25

EDUCATION

Lovely Professional University Phagwara, Punjab
Bachelor of Technology Aug' 23 – Present
Computer Science and Engineering; CGPA: 7.77

Yeshwant Mahavidyalaya (JR.). Nanded Nanded, Maharashtra
Intermediate Jul' 20 – Mar' 22
PCM; Percentage: 68

Shankarrao More Vidyalaya And Junior College Pune, Maharashtra
Matriculation Jun' 18 – Mar' 20
Percentage: 94.40
